The *Tobacco Situation* is published in March, June, September, and December.

#### SUMMARY

Tobacco Use Slips; Smaller Crop in 1977

The slow growth in U.S. cigarette sales and lagging tobacco exports has caused U.S. tobacco disappearance for the 1976/77 marketing year to slide below last season's level and to fall short of 1976's output. Thus, carryover by July 1 (October 1 for burley and other kinds) will rise some 250 million pounds above last year's 3½ billion pounds.

Domestic cigarette use for the 10 months ended April 1977 increased about 1 percent and cigarette exports were up 5 percent. Manufacturers have worked off inventories, so cigarette output in the year ending June 30 may be slightly below the 688 billion cigarettes produced last fiscal year. Gains in cigarette sales and inventories should help boost production in the second half of 1977.

Contrasting with the stability in cigarette smoking, but consistent with recent trends, output of cigars and smoking tobacco continues below a year earlier. Snuff and chewing tobacco production is increasing.

Unmanufactured tobacco exports for July 1976-April 1977 totaled 6 percent below a year earlier. So shipments for the year ending June 30 will probably fall below the 588 million pounds (652 million pounds farm-sales weight) of last fiscal year. World demand for U.S.-type blended cigarettes is still climbing, but some overseas markets have either slowed their purchase rate or shifted to competing tobacco because of sharp price increases to consumers and discriminatory nontariff barriers.

Prospects are for a smaller 1977 U.S. crop at increased prices. But the large quantity of lower stalk tobacco under loan means export grades remain in limited supply. Thus, unmanufactured tobacco exports for July-December 1977 will do well to equal the 287 million pounds (export weight) of a year earlier. Our exports are helped by overseas preference for full-flavor U.S. tobacco and the bilateral trading patterns of a number of Asian countries. Exports to countries in the European Community have declined during the past 12 months and may decline further over the next 12 months.

Flue-cured tobacco exports were off 8 percent in July 1976-April 1977. The largest drop was in shipments to the United Kingdom, reflecting continued shifts to cheaper, tariff-preference tobaccos. For the

year ending June 30, exports may reach about 365 million pounds (485 million, farm-sales weight), 6 percent below 1975/76. Burley exports for the crop year ending September 30 are expected to exceed last year's total of 72 million pounds (92 million, farm-sales weight).

During July 1976-April 1977, cigarette leaf tobacco imports for consumption—at 159 million pounds (declared weight)—fell below a year earlier. Cigar leaf imports gained 5 percent. U.S. manufacturers' stocks of imported tobacco on April 1 were below a year earlier.

With a decline in cigarette output and decreased tobacco use per cigarette, domestic flue-cured use in the year ending June 30 should drop 3 percent from last season's level. With a lower level of exports, total disappearance of flue-cured will run about 4 percent below the 1.2 billion pounds of last season. The July 1977 carryover of flue-cured likely will gain a tenth from the 1.9 billion pounds of a year earlier.

April planting intentions point to 12 percent less flue-cured acreage than last year. A projected crop 10 percent smaller seems reasonable. For the new season, total supply (estimated carryover plus the projected 1977 crop) may gain a little. The prospective smaller 1977 crop and a 7-percent higher support level means prices are expected to average above last year. The Crop Production Report to be issued July 12 will include a production forecast based on yield surveys conducted about July 1.

Auctions for the flue-cured crop are expected to open the week of July 11. The grower designation provisions remain in effect. To receive price support, growers must plant within 110 percent of the farm acreage allotment. Growers must also certify that they did not use DDT, TDE, toxaphene, or endrin pesticides on their crop.

Use of burley tobacco may total a little above last season's 601 million pounds but well below last year's large crop. Thus, the October 1 carry-over is expected to rise from last year's 1,131 million pounds. Lower farm poundage quotas indicate growers in 1977 are expected to produce and market a smaller crop than last year and keep total supplies about the same as for 1976/77.

Auction markets for the 1976 crop of Maryland tobacco began April 13 and ended June 16. For the larger crop, prices averaged \$1.10 per pound, about the same as a year earlier. Disappearance of Maryland tobacco in the current marketing year may drop from last season; carryover may fall below 1976's.

Use of fire-cured and dark air-cured tobacco is increasing from last marketing year's low level. Domestic cigar tobacco disappearance is declining. Nevertheless, estimated use for most of these types of tobacco will exceed last year's crops, leaving less carryover into 1977/78. Tentative 1977/78 supplies are a little above the previous season for fire-cured and cigar filler, but lower for dark air-cured, cigar binder, and wrapper tobaccos.

#### TOBACCO PRODUCTS

#### Smaller U.S. Cigarette Output in 1976/77

With steady economic growth and fewer shipping uncertainties, U.S. wholesalers from July 1976 through April 1977 shipped about 1 percent more cigarettes than in the comparable period in 1975/76. Consumption by U.S. smokers (including those overseas) in the year ending June 30, 1977, may have increased from the previous year to around 620 billion cigarettes (table 1). Gains in domestic cigarette use are expected to continue during July-December 1977. Estimated output in 1976/77 may total 680 billion cigarettes, about 1 percent below the 1975/76 level. Allowing for an estimated 3-billion-cigarette decrease in inventory, this still includes about 63 billion cigarettes for exports and shipments to Puerto Rico and other U.S. possessions. During the 10 months through April 1977, exports gained 5 percent, reflecting the continued growth in worldwide preference for US. cigarettes (table 2).

As estimated by State tax data, unit cigarette

sales in January-March 1977 were up 1½ percent from a year earlier. The gain in cigarette sales parallels the increase in adult population. Retail prices have gone up in the past 12 months, in part due to a rise in wholesale prices. State tax rates have remained the same.

### Low-Tar, Low-Nicotine Cigarettes Take Larger Market Share

Low-tar, low-nicotine cigarettes, which have been heavily promoted and have gained sharply, now total about 20 percent of the domestic market. Generally considered to yield less than 15 milligrams of tar per cigarette, the category includes at least 40 different cigarette brands or brand variations. For a number of years the average tar and nicotine content of cigarettes has been declining as manufacturers shift the tobacco blends, utilize more efficient filters, and make adjustments in the cigarette paper.

#### Federal Government Activities

The Federal Trade Commission has sued in Federal District Court to require six major domestic cigarette manufacturers to file special reports on cigarette advertising and labeling. The special reports were originally ordered in May 1976, to enable the Commission to prepare the statistical supplement to the annual report to Congress on cigarette labeling, advertising, and promotion—as required by the Public Health Cigarette Smoking Act of 1969. After considering the companies' objections, the Commission had set new deadlines of mid-April 1977. In past years the companies have filed similar reports, but last year they refused to do so because the FTC could not guarantee their confidentiality.

The FTC's comprehensive investigation of cigarette advertising and promotion (authorized in May 1976) was delayed over the past 12 months while the FTC considered various motions of the six cigarette companies, 20 advertising agencies, and two other parties. Objections were raised concerning FTC jurisdiction and various procedural matters. As a result, in May 1977, the FTC modified its investigation request.

#### Cigar Volume Slips

From July 1976 through March 1977, U.S. cigar consumption totaled 3.7 billion *large cigars* (including cigarillos), 8 percent fewer than the year before. For 1976/77, consumption is expected to have fallen by a similar percentage. Since 1971, consumption has declined almost steadily. Demand

has been declining in low and medium price categories for several years. In contrast, demand for higher price cigars from Puerto Rican and U.S. factories remains strong (table 3).

Production of *small cigars* (those weighing less than 3 pounds per thousand) totaled 1.7 billion in the 9 months through March 1977. The total fiscal year output probably fell one-fifth from 1975/76. The small cigar decline partly reflects the reduced level of advertising since 1972 (table 4).

According to the annual survey by the Cigar Association of America, sales of cigarillos totaled 1.8 billion in calendar 1976. Cigarillos weigh between 3 and 10 pounds per 1,000, less than half as much as the traditional cigar. Cigarillo sales (based on taxable removals) in 1976 were 34 percent of total sales of large cigars and cigarillos, up from 30 percent in 1975. The cigarillo share reached a high of 38 percent in 1971.

#### **Smoking and Chewing Tobacco**

Smoking tobacco production and consumption for the year ending June 30 is continuing the downtrend started in 1970. In the first 9 months of 1976/77, domestic smoking tobacco output fell 6 percent to 32 million pounds. Imports also declined and total domestic sales dropped 2 percent to 39 million pounds. Declines occurred in sales of domestic tobacco for both pipes and roll-your-own cigarettes.

Smokeless tobacco output in 1976/77 is estimated above the the previous year. Gains are occurring in production of loose-leaf chewing tobacco and snuff.

Table 4-Tobacco products: Output, 1975-77

1/ Total removals (or sales) from U.S. factories plus those from Puerto Rico, and imports, minus exports. 2/ Subject to revision. 3/ Estimated.

Compiled from reports of the Bureau of Alcohol, Tobacco, and Firearms and the Bureau of the

Census, and AMS, USDA. TS-160 JUNE 1977 7

#### U.S. EXPORTS AND IMPORTS

#### Leaf Exports Pace Slipping

For the year ending June 1977, exports of unmanufactured tobacco are estimated slightly below last fiscal year's 588 million pounds (export weight). During July 1976-April 1977, shipments decreased 5 percent to 503 million pounds. The average unit value of exports increased 7 percent. January-April exports of 217 million pounds were 8 percent below the 236 million pounds in the same months of 1976 when a bulge in Japan's shipments occurred.

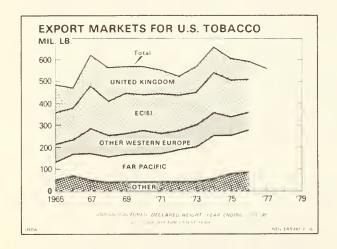

Flue-cured tobacco exports were down 8 percent in the July-April period, accounting for the decline in total exports. Exports of burley and Maryland gained. Shipments of fire-cured tobacco (Ky.-Tenn.) were down slightly. An increase occurred for July-April exports to Japan, Australia, Thailand, and Sweden. Virtually all the European Community (EC) countries took less. United Kingdom and West Germany are the two leading EC destinations (table 5).

If better U.S. growing conditions continue and result in a higher quality crop than in the past 2 years, our export prospects for the rest of 1977 could hold around the July-December 1976 total of 287 million pounds. For those months in 1971-75 the average was 300 million pounds. Higher prices this season will limit our exports later in the marketing year.

#### Import Pace Steadies

U.S. tobacco imports for consumption (factory use of imports) during January-April 1977 were about the same as the level of a year earlier (table-6). A decline occurred for cigarette tobacco imports while cigar filler categories gained. Supply of U.S. cigarette tobacco has increased while the cigar tobacco supplies are down.

January-April 1977 arrivals of tobacco (general imports) totaled 105 million pounds, down substantially from the same period a year earlier. U.S. purchases of oriental tobacco are down sharply due to high prices. By April 1 of this year, stocks of foreign-grown cigarette and smoking tobacco in the United States declined 30 million pounds, 5 percent below a year earlier. The decline occurred in oriental tobacco as foreign-grown flue-cured and burley increased to a record high for that date, although barely over the level of mid-1975 (table 7).

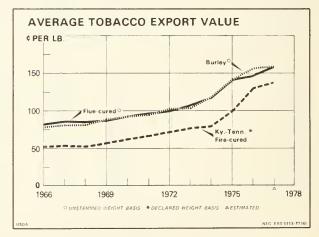

Table 5—United States exports unmanufactured tobacco by type and to principal importing countries for specified periods

#### TOBACCO LEAF SITUATION AND OUTLOOK

#### 1977 Crop Prospects

Dry weather during most of May was the dominant condition affecting the crop early in the season for flue-cured States. But flue-cured areas received beneficial rains the last week of May. About adequate rainfall was reported during May in most burley areas. By early June, tobacco setting was completed in North Carolina and Virginia and almost finished in Kentucky. Harvest was progressing normally in Georgia and Florida. However, the weather pattern early in the season may result in wide variation in crop maturity.

<sup>&#</sup>x27;All quantities in this section are stated in farm-sales weight equivalent unless otherwise noted.

The Flue-Cured Tobacco Advisory Committee will meet June 23 to recommend to USDA opening dates and selling schedules for the 1977 flue-cured tobacco marketing season. Auctions for the 1977 flue-cured crop are expected to begin July 11 or 12 for type 14 (Ga.-Fla.), and in successive weeks for designated marketing areas. Opening dates depend on when sufficient volume is marketable in a given area. Last year's auctions began July 8.

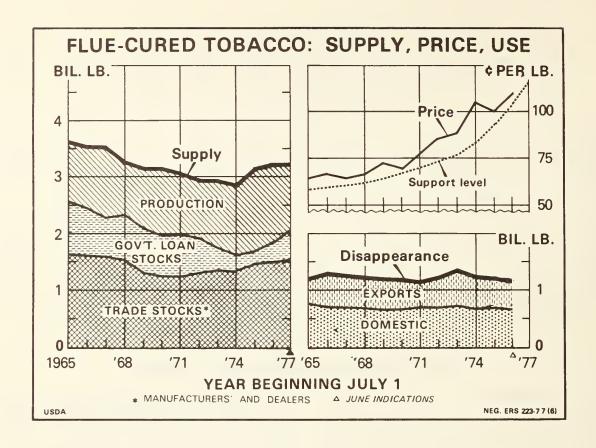

Crop quality will again influence prices. Despite the larger carryover, the smaller crop this season, and 7-percent-higher support level mean prices are expected to average above last year.

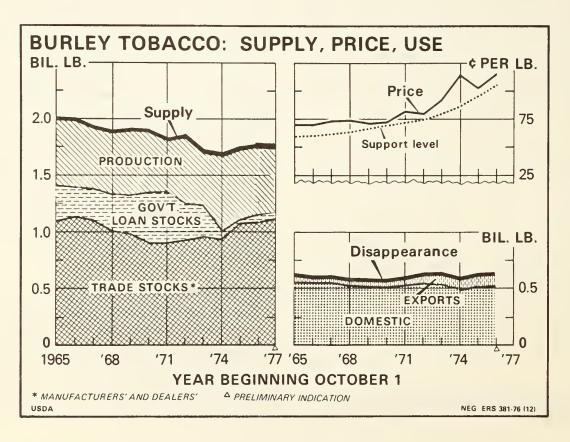

USDA's Crop Reporting Board will publish its first estimate of flue-cured yield per acre and production on July 12. Subsequent monthly reports, beginning August 12, will also estimate yield and production for burley and other kinds. During the last decade, the final crop estimate closely approximated the first forecast, with the final figure coming within 1½ percent of the July estimate in 7 out of 10 years.

### Pesticide Residue Developments

As a condition for receiving price support, growers must certify that they did not use DDT, TDE, endrin, or toxaphene pesticides. If growers certify falsely, they are subject to fines or imprisonment.

DDT and TDE residue levels have been falling for several years. If an analysis shows DDT-TDE residues of 3 parts per million (p m) or greater, the grower is declared ineligible for price support loan.

DDT-TDE residues of 10 p/m or greater means growers are in violation if they certified that chemicals were not applied to the crop.

#### FLUE-CURED

#### Leaf Stocks Higher; Use Declines

April 1 stocks of flue-cured tobacco (types 11-14) totaled 2,305 million pounds, 216 million above a year earlier. About one-fourth of the increase was due to an upward revision in the conversion factor (stemmed leaf to farm-sales weight). As a result of the large loan receipts from the 1976 crop, loan stocks rose sharply to 568 million pounds. Manufacturer and dealer holdings remained about the same.

Total disappearance during July 1976-March 1977 was 909 million pounds, about 6 percent lower than the corresponding period of 1975/76. Both exports and domestic disappearance declined by a similar percent. Cigarette production fell 2 percent. Use of imported tobacco for cigarettes dropped 9 percent.

#### **Export Pace Slows**

With the price climb resuming, U.S. flue-cured exports this marketing year are dropping below last season's level. For the ten months through April, exports totaled 445 million pounds, about 8 percent below the same period a year earlier.

Japan, United Kingdom, and West Germany, the three leading destinations for U.S. flue-cured tobacco, each decreased takings in July-April. Except for Italy and France, U.S. volume to the EC countries is down and may decline further in the 1977 season.

Rising U.S. prices encouraged EC manufacturers to import from other sources that enjoy preferential duties. However, U.S. tobacco exports to Italy and France benefited from increased demand for American-type blended cigarettes. Several countries in Asia have been able to take more U.S. tobacco in offsetting their trade earnings from substantial manufactured shipments to the United States.

#### Disappearance Decreasing

Disappearance of flue-cured tobacco in the 1976/77 marketing year ending June 30 is about 4 percent below the 1,193 million pounds used in 1975/76 (table 8) and about 12 percent below the record set in 1973/74. Lower exports and domestic use account for the decline from last year's level. These prospects bring total disappearance to 1,150 million pounds, about 166 million below last season's marketings. Carryover probably went 200

million pounds above a year earlier, but is still one-fifth below the 1965 record.

During July 1976-May 1977, 44 million pounds of loan stocks were sold, 25 million above the low level of 1975/76. Due to the large receipts in 1976, unsold stocks on May 31, 1977, totaled 570 million pounds, compared with 340 million a year earlier. The record was 960 million on January 1, 1965 (table 9).

#### 1977 Flue-Cured Acreage Decreased

The 1977 effective flue-cured acreage allotment, reflecting last year's net overmarketings, is about 651,700 acres, and the effective poundage allotment is about 1,197 million pounds, down 15 percent from last year. Even though acreage compliance is resumed, the harvested acreage will again fall considerably short of alloted acreage (table 10).

With the flue-cured basic quota down 12 percent, growers' April 1 intentions were to set about 12 percent less flue-cured acreage than in 1976. In 1976, growers leased 30 percent of the poundage quota from other allotment owners within their county. The proportion is expected to remain near that level this year. Higher lease rates may have prevailed this season. Since 1972, flue-cured marketing quotas can be leased and transferred throughout the season.

Based on growing conditions to date on the intended acreage, the crop may total about 1.15 billion pounds. Production at this level, plus the prospective carryover, would bring the total 1977/78 supply to about the same as the 3.2 billion pounds in 1976/77.

#### 1977 Price Support Details

Flue-cured is under acreage-poundage marketing quotas and price support is not provided if growers exceed their farm acreage allotments by more than

10 percent. For the 1974-76 crops, flue-cured producers' planted acreage was not a condition of price support. Numerous producers and farm organizations requested that producers comply with acreage allotments. A tolerance is provided to accomodate mechanization and the practice of leaving the inferior tobacco unharvested. Marketings in excess of the farm poundage allotment are deducted from the following year's quota while those in excess of 110 percent of the quota are penalized 83 cents per pound.

USDA announced on May 25 the proposed 1977 loan rates for the various grades of flue-cured tobacco. Rates range from 73 cents to \$1.47 a pound reflecting the national average support level of \$1.138 a pound. This is about 7 percent above 1976. The largest increases were for leaf grades, which typically account for over half of the farm sales and have been in strongest demand in recent years.

As in the past, no price support will be offered in 1977 on any tobacco graded N2 (second quality nondescript), No-G (no grade), U (unsound). W

(doubtful keeping order), or scrap. Marketings of such tobacco will be charged against individual farm quotas to discourage the marketing of these grades.

Leasing regulations have been changed to limit leasing after June 14 to the difference between expected production from planted acreage and actual production. Also, the receiving farm may not lease in more than the difference between the farm quota and poundage for marketing.

#### **New Grade Standards**

This spring USDA issued revised standard grades for flue-cured tobacco. More stringent waste tolerances have been established for the non-descript group. A more precise definition of foreign matter is given. The buildup in loan stocks of low-stalk grades and the accompanying problems of sand and other foreign matter have affected the overall quality of tobacco. USDA is cooperating with State organizations and farm groups in publicizing the change.

#### Flue-Cured Production Costs Rising

Unit costs of producing flue-cured tobacco in 1977 are estimated 5 to 6 percent higher than last season. This estimate excludes quota rent or any return to land and management. Preharvest costs probably have risen only 2 to 3 percent but harvest costs may run 6 to 8 percent higher. The smaller gain in preharvest cost is attributable to stable or lower agricultural chemical and fertilizer prices. Costs of machinery, barns, fuel, and wage rates are

5 to 10 percent higher than a year ago. Electricity rates are more than 10 percent higher than a year ago. A detailed estimate will be published in the September 1977 issue of *Tobacco Situation* (Verner Grise).

## Flue-Cured Growers Again Designate Warehouses

By the April 8 deadline, growers of flue-cured tobacco had designated 96 percent of their marketable quota to the auction warehouses where they wish to market their 1977 crop (table 11). This procedure began in 1974 as a requirement for price support and has resulted in most producers receiving equitable marketing opportunities and in much more orderly marketing than had prevailed previously. Sales schedules and inspection services are provided at individual warehouses on the basis of quantity of tobacco designated.

After growers make warehouse designations at their local Agricultural Stabilization and Conservation Service office, grower lists are prepared for each warehouse and the information sent to the Flue-cured Tobacco Advisory Committee. Besides opening dates and sales schedules, the Committee recommends the geographic areas to be included in specific marketing areas.

As occurred last year, sales opportunity for undesignated tobacco will be based on positive actions by growers indicating they wish to sell their tobacco on undesignated marketing cards. Assignment is in proportion to each warehouse's share of a marketing area's volume of designated tobacco.

<sup>&</sup>lt;sup>1</sup> Data may not add to totals due to rounding. <sup>2</sup> Growers are allowed to designate 110 percent of their effective quotas. <sup>3</sup> Computed from unrounded data. Compiled from reports from

Tobacco Division, Agricultural Marketing Service and Tobacco and Peanut Division, Agricultural Stabilization and Conservation Service.

Provisions have been made again for growers wishing to change their designation during the marketing season. Growers are allowed to redesignate their tobacco during the 5 working days ending on the first Friday in each month after markets have opened.

#### BURLEY

#### Burley Packaging Experiments Reviewed

A wide diversity of views have been voiced by farm organizations, marketing organizations, exporters, and domestic manufacturers about the desirability of changing the customary burley marketing procedure (several leaves tied at the butt end with a tobacco leaf, and sold in lots averaging over 400 pounds each). Budget estimates indicate stripping and marketing take from 40 to 50 percent of the labor required for burley production.

In the experimental untied sales this past season, buyers agreed in advance to pay prevailing prices for comparable burley grades. Under tobacco grading rules, untied burley is ineligible for standard grade designations and hence does not qualify for price support. USDA officials have indicated they are studying all available data and views before deciding about the marketing procedure.

#### Burley Use Up Slightly

Exports were ahead but domestic use of burley fell slightly in the first half of the marketing year (October-March). At 323 million pounds, disappearance was 3 percent above a year earlier. Domestic use totaled 268 million pounds, down 8 million, although cigarette output rose 1 percent.

The overall tobacco weight per cigarette is again dropping, but evidently manufacturers have reduced the burley share (both imported and domestic) as more low tar-nicotine and mild, filter cigarettes are produced.

For the first 7 months of the marketing year, burley exports totaled 65 million pounds, 1 million above a year earlier. Italy, Switzerland, West Germany, Thailand, and Japan took more. Egypt, Syria, and Philippines purchases declined. On an unstemmed-leaf basis, burley exports averaged \$1.58 per pound this past October-April, up slightly from a year earlier.

#### Carryover Rising

Despite last year's moderate carryin, burley users have maintained usage. By April 1, with the larger 1976 crop in storage, stocks totaled 1,502 million pounds, about 5 percent larger than a year earlier. On April 30, loan holdings were 81 million pounds, about 29 million larger than a year earlier. However, steady domestic use and an increase in exports, to meet rising production of cigarettes, are expected to increase disappearance by 13 million pounds. Even this increase in disappearance will not offset the 1976 crop resulting in an increase in carryover by about 4 percent to around 1,210 million pounds on October 1 (table 12).

In addition, burley growers have 20 million pounds of overquota tobacco remaining from the 1976 crop. Rather than sell this tobacco last season and pay a stiff penalty, growers arranged with warehouses for delivery, processing, and storage. Sales will occur after the 1977/78 marketing year begins on October 1, and apply on the 1977 crop quota.

Details may not add to total due to rounding.

Compiled from records of Tobacco and Peanut Division, ASCS.

The effective 1977 burley poundage quota is down 6 percent. April 1 intentions indicated farmers planned to set about 4 percent less burley acreage than last year. Assuming yields near the 1971-75 average, production will total 625 million pounds, down about 40 million pounds from last year's crop. Indicated carryover, plus the projected crop, would result in 1977/78 supply about the same as this year's 1.8 billion pounds.

#### SOUTHERN MARYLAND

#### Crop Larger, Supply Smaller

A continued decline in supply for Maryland tobacco (type 32) relative to demand has maintained auction prices at a record high. Prices averaged \$1.10 per pound through June 14, about the same as a year earlier. Maryland tobacco goes almost entirely into cigarettes. Quality was about the same and prices of all grades were close to last season. Auction sales began April 13 and ended June 16. Sales of the 1976 crop in Southern Maryland were about one-fifth above the small 1975 crop outturn, but 2 millon pounds below the crop estimate. The yield was up from the previous year's weather-reduced crop.

Growers have not approved marketing quotas since the 1965 crop and Maryland tobacco has not been eligible for government price support. Supplies have dropped about 30 percent since 1966.

Disappearance during the first half of the marketing year (October 1976-March 1977) was 10.6 million pounds, about 1.5 million below a year earlier. Domestic disappearance declined, but exports increased. In the first 7 months of the current marketing year, exports were 1.5 million pounds above

a year earlier with most of the gain represented by Switzerland.

#### Carryover May Drop Again

For the 1976/77 season ending in September, disappearance of Maryland tobacco is expected to drop 4 million pounds from last season's 35 million pounds (table 13). Supplies are below last season. Carryover next January 1, (the date used for marketing quota calculations) may drop below this year.

Based on the April planting intentions report and average yield, the 1977 crop may equal the 1976 outturn. Over the past decade, harvested acreage generally has fallen about 5 percent short of spring plans. April plans are made before the previous season's crop has been marketed (mid-April to mid-June). But if the prospective crop is achieved, the supply for 1976/77 would be about 3 percent below the 71 million pounds for this season.

#### FIRE-CURED

#### Disappearance Rises

Disappearance of fire-cured tobacco (types 21-23) during the first half of the marketing year that began October 1, 1976, was about 21 million pounds, up 4 million pounds from the lowest on record. Exports were up about 1 million pounds. Record crop prices may have contributed to the slowdown in use in the two previous seasons. This year, buyers apparently needed to replenish small stocks from a larger crop (table 14). A fire destroyed 400,000 pounds of Virginia tobacco in

<sup>&</sup>lt;sup>1</sup> Subject to revision. <sup>2</sup> Less than 50,000,lbs. <sup>3</sup> Based on April 1 prospective plantings and average yield with allowance for trend and estimated stocks. <sup>4</sup> Estimated. <sup>5</sup> Quantity placed under Government loan reported in thousand pounds.

December soon after purchase. Severe weather delayed the marketing season.

Due to sharply higher prices in last season's markets, growers of fire-cured tobacco again may increase acreage. According to April 1 planting intentions, increases are expected in Kentucky and Tennessee. On indicated acreage with an average yield, growers would produce a 37-million-pound crop, about 4 percent larger than in 1976 and about 15 percent above the 1970-74 average. The supply for 1977/78 may gain slightly from this season's.

Exports of fire-cured tobacco in 1976/77 may decline from last season. Exports of 11 million pounds of types 22-23 during October 1976-April 1977 were 0.8 million below a year earlier. The Netherlands and France, usually the leading outlets, reduced their takings. Exports of Virginia firecured tobacco at 4 million pounds in October 1976-April 1977, were up 0.9 million from a year earlier.

#### DARK AIR-CURED

#### Supplies Declining

Total disappearance of dark air-cured and suncured tobacco (types 35-37) during the first half of the current marketing year was 12.4 million pounds, 18 percent above a year earlier. Use was up even though the manufacture of plug chewing tobacco—a major domestic outlet for this dark air-cured tobacco—was below a year earlier. Exports of Black Fat tobacco—a semi-processed product of mostly dark air-cured and fire-cured leaf—decreased about 10 percent in October 1976-April 1977 from the year-earlier level of 1.4 million pounds. Almost all goes to West African destinations. Domestic disappearance was up and exports were down slightly. For the year ending September 30, 1977, total disappearance may

increase, and exceed last year's crop, reducing carryover again (table 15). (See page 20).

Growers of dark air-cured and sun-cured tobacco plan to harvest about 5 percent more acreage this year than last year's 10 thousand acres. With lower carryin stocks, the 1977/78 supply will drop below the 47 million pounds in 1976/77 by about 4 million.

#### **CIGAR TOBACCO**

#### 1977 Prospects

Supplies of domestic-grown cigar tobacco are smaller again this year, due to the lower carryover stocks. Production in 1977/78 is projected about the same as last year's crop even though intended acreage is down 3 percent. Considering average yields, a 4-percent increase is expected for the filler crop. Binder output may increase slightly with closer-to-average yields than last season. Wrapper production may decline by almost one-fifth.

April 1 holdings of U.S. and Puerto Rican cigar tobacco (types 41-62) totaled 140 million pounds, slightly below a year earlier. The decrease was primarily in the binder and wrapper types as holdings of filler increased. On April 1, U.S. stocks of foreign-grown cigar tobacco totaled 111 million pounds, about 88 percent of a year earlier.

During October 1976-April 1977, manufacturers used about the same amount of imported cigar tobacco as a year earlier. Imports from Brazil gained while those from most other sources declined (table 16).

Another decrease has occurred in wrapper acreage. Plantings are down in 1977 after a decline in prices for Connecticut Valley wrapper, and production remains low in Georgia-Florida. This year, USDA again suspended Connecticut Valley binder

1 -				-							

October 1 for types 41-55; July 1 for types 61-62. Estimated. Includes estimated carryover. Estimated production based on April 1 intended acreage and projected yields. Excludes payment by Puerto Rican Government; 23 cents per pound in 1976. Puerto Rican planting occurs late in calendar year; projected for 1977. Evaluated at 50.7 cents per pound. Less than 50,000 pounds.

allotments (types 51-52). Also, USDA transferred filler and binder allotments (types 42-44 and 53-55) to growers who wanted to increase their 1977 plantings. Under terms of this annual reallocation, USDA transferred the allotments from growers who did not wish to use their allotments this year. In Wisconsin, 2,438 acres were reallocated, and 1,084 acres were reallocated in Ohio.

## Filler Supply Up, Disappearance Remains Low

Disappearance of cigar filler during October-March was 19 million pounds, 1 million pounds above the low level a year earlier. Virtually all cigar filler goes for domestic use. Short supplies and declining cigar production contributed to declines in disappearance in most recent years.

Based on historical trends and partial 1976/77 data, filler tobacco disappearances may remain about 25 percent below that of three seasons ago (1973/74). Declines are indicated for Ohio and Puerto Rican types. Since filler disappearance is expected to be below production by about 2 million pounds, carryover on October 1 may rise to around 62 million pounds, just over last season's record low (table 17).

#### Binder Disappearance Mixed

Cigar binder disappearance for October 1976-March 1977, was 12 million pounds, slightly above a year earlier. Wisconsin binder (types 54-55) increased slightly while Connecticut Valley binder (types 51-52) declined about 1 million pounds.

Disappearance of Connecticut Valley binder to bacco for 1976/77 is estimated below last season's output so carryover this October 1 may rise by 2 million pounds from the very low level in 1976.

Despite gains in production of looseleaf chewing tobacco and the more expensive categories of cigars, use may not rise much above the 22 million pounds of last season. Therefore, carryover stocks will probably remain near 43 million pounds.

#### Wrapper Use Continues to Decline

A decline in domestic cigar production and rising costs of leaf production curtailed both the use and supply of shade-grown wrapper (types 61-62) in recent years. Disappearance during July 1976-March 1977 was 6 million pounds, down 1 million from a year earlier, continuing the long term trend. Although the average price to growers declined 10 percent last season, no break in the decline in cigar wrapper disappearance is expected. Carryover will be down about a tenth. During the first 10 months of the marketing year, cigar wrapper exports were 3 million pounds, down almost 1 million from a year earlier. The United Kingdom, the major destination, took less earlier in the year than last year, as high U.K. duties continue to discriminate against U.S. tobacco relative to other wrapper sources.

#### WORLD TRADE HIGHLIGHTS<sup>2</sup>

#### Import Highlights

The United States with imports for consumption of 141 thousand tons (311 million pounds) and 158 thousand tons arrivals (348 million pounds), last year ranked third as an importer of cigarette and cigar tobaccos, mainly for blending with domestic types. The United Kingdom and West Germany, ranked first and second, respectively, among tobacco-importing countries (table 20).

Japan, the principal buyer of U.S. tobacco, imported a record 56.5 thousand tons of U.S. tobacco in 1976—up sharply from relatively low imports in 1975 and well over half of Japan's imports. The Japan Tobacco Corporation's overall imports reflect changes in Japan's domestic production levels. Cigarette price increases in December 1975 contributed to a 10-percent drop in Japan's cigarette sales in 1976.

<sup>&</sup>lt;sup>2</sup>Weight references in tons are *metric* ton, i.e., 2,204.6 pounds.

Of European Community imports of 519 thousand tons in 1976, imports from the U.S. of 121 thousand tons were down 6 percent. Duty discrimination against U.S. tobacco relative to other sources has been a factor in the decline in U.S. tobacco share.

West Germany's tobacco imports rose to almost 144 thousand tons. The United States remained the leading tobacco supplier. West Germany was the U.S.'s second largest customer, taking 43 thousand tons in 1976. Nevertheless, the increasing amount coming from developing countries under EC preferential tariff treatment is placing U.S. tobacco at a competitive disadvantage.

United Kingdom's imports rose slightly to 144.5 thousand tons in 1976, but imports from the U.S. fell 13 percent to 35.2 thousand tons. Prospects for U.S. exports in 1977 are dimmed due to U.K. cigarette tax increases and declining tobacco consumption.

As part of the EC's cigarette tax harmonization scheme, the United Kingdom's tobacco revenue tax structure was changed in 1976. An ad valorem tax on the retail cigarette price was introduced, which raised cigarette prices about 10 percent. This tax change was followed by a 10-percent surcharge which raised the tax on unmanufactured tobacco and raised retail cigarette taxes to 22 percent. (An ad valorem tax gives price advantages to less expensive tobacco grown in the EC and to nations receiving EC duty preference rates.) In March 1977, the tax on cigarettes was raised 7 cents per pack bringing the price of the cheapest cigarettes to about 84 cents. This latest increase is expected to further retard both tobacco consumption growth in the United Kingdom and U.S. tobacco exports to that destination.

Heavy advertising for cigarette brands made of synthetic material mixed with tobacco has started in Britain. Sales of synthetic tobacco brands have been poor in West Germany and have been a limited success in Switzerland since 1975. The new cigarettes will contain 29-40 percent of the cellulose "new smoking material" and taste much like low-tar cigarettes. Some U.K. manufacturers believe the allowance of additives, particularly flavors, will permit making the same American-type cigarette blends that are sold in the United States. Current versions of U.S. brands but without added flavors have not sold well in the U.K. market.

Italy was the fourth largest U.S. market in 1976. Over half of Italy's 33 thousand tons imports were U.S. tobacco. Italy exported 53 thousand tons of tobacco to countries outside the EC in 1976; about half was burley, a major U.S. export type. Italy's 1976 production fell 3 percent from 1975's.

France, the fourth largest tobacco importer (83 thousand tons), purchased only 2 thousand tons of

U.S. tobacco as the output of American-type blended cigarettes in France is small, but growing.

The Netherlands, with total imports of 54 thousand tons, imported about one-fifth from the U.S. Belgium-Luxembourg, Denmark, and Ireland in 1976 imported over 60 thousand tons with 22 percent originating in the United States.

#### Foreign News Briefs

The U.S. Special Representative for Trade Negotiations, (STR) stressed the need to make progress on Multilateral Trade Negotiations (MTN) and to keep agricultural and industrial negotations together, before the Trade Policy Research Center, London, April 25. The STR, Ambassador Robert Strauss, said the United States seeks a policy of the most open possible trade, but it must also be fair. U.S. negotiators will seek relief from nontariff trade barriers, special preference tariffs, and ad valorem taxes that discriminate against U.S. tobacco and have led to a decline in U.S. exports as world trade increases.

Canada has set a two price system for the tobacco crop with a guaranteed minimum for the 1977 Ontario flue-cured crop of \$1 per pound for 205 million pounds. The poundage rather than acreage control system is required by Ontario Tobacco Manufacturers' Council for guaranteeing a minimum price for the 1977 crop. Export prices would average about 86 cents with the difference from the guaranteed price being paid out of a \$9.7 million fund.

On April 1 the 1976 flue-cured crop sales season ended. The season average price reached a low of \$1.02 per pound, 2 cents above the minimum guaranteed by the Ontario Tobacco Manufacturers' Council.

Egypt, with the help of dollar credit financing through Title I, PL 480, purchased 5 thousand tons of U.S. tobacco worth \$17.6 million in 1976. Egypt is the largest buyer of U.S. tobacco in Africa.

Australia purchased less than 5 thousand tons of U.S. tobacco in 1976, compared with 8.5 thousand tons in 1974. Constantly rising cigarette prices resulted in a substantial decrease (6 percent) in consumption in the last 2 years. Higher State and national taxes are blamed for much of the price increase.

Rhodesian production is estimated to remain near 85 thousand tons, of which only a portion enters the export market because of political unrest within Rhodesia and economic sanctions against Rhodesian tobacco by former major customers in Europe.

Turkey, the prime source of U.S. imports of oriental tobacco, produced a record crop in 1976 that could temper the recent high prices of oriental tobacco.

<sup>&</sup>lt;sup>1</sup> July-June crop year for flue-cured, cigar wrapper, stems, trimmings, and scrap; October year for all others. <sup>2</sup> Subject to revision. <sup>3</sup> Less than 50,000 pounds. Detail may not add to total due to rounding. Compilation through April available from Room 200, CED, ERS, USDA, Washington, D.C. 20250.

Compiled from publications and records of the Bureau of the Census.

#### RECENT PUBLICATIONS

Flue-Cured Tobacco Mechanization and Labor: Impacts of Alternative Production Levels, by Frederic L. Hoff, William D. Givan, Owen K. Shugars, and Verner N. Grise. Economic Research Service, U.S. Department of Agriculture, Agricultural Economic Report No. 368, April 1977, 24 pp.

The rapid trend toward harvest mechanization experienced in 1972-75 will continue into the 1980's, according to an analysis of a wide range of quota levels and wage rates. Adopting new harvest technology is profitable for farmers, and it will have an impact on the demand for harvest labor. In the aggregate, however, harvest mechanization will not cause serious unemployment problems in the flue-cured tobacco belt. Harvest jobs are part-time and seasonal. Workers most likely to lose harvest job opportunities are young persons and women. Available from ERS Publications, Room 0054, USDA, Washington, D.C. 20250.

Tobacco Production, by James F. Chaplin, in association with A. H. Baumhover, C. E. Bortner, J. M. Carr, T. W. Graham, E. W. Hauser, H. E. Heggestad, J. E. McMurtrey, Jr., J. D. Miles, B. C. Nichols, W. B. Odgen, and H. A. Skoog, Agricultural Research Service, U. S. Department of Agriculture, Agricultural Informatin Bulletin No. 245, December 1976, 77 pp.

Discusses cultural practices for various types of U.S. leaf tobacco from seedbed through harvesting, curing, and preparing for market. Includes considerable discussion on herbicides for weed control.

diseases, nematodes, insects and related pests. Illustrated. Available from ARS Publications, 346 FCB-1, Hyattsville, Md. 20782.

"Rhodesia's Political Change May Alter Tobacco Trade," by Robert E. Haresnape, *Foreign Agriculture*, April 25, 1977, pp. 2-4.

Rhodesia's emergence as a major exporter until the 1965 political developments is traced. Three future scenarios are traced where exports could expand, decline, or stagnate, depending on Government policies.

Cigarette Bootlegging: A State and Federal Responsibility? Advisory Commission on Intergovernmental Relations, November 1976. 139 pp.

Discusses tax administration problems that have developed since 1965—the transportation of cigarettes from low tax States for sale in high tax States. Reviews Federal and State policies, including the Jenkins Act, and proposed Federal contraband legislation, and State enforcement efforts. The excise tax exemption of cigarette sales to Indians and military personnel was estimated to have cost State and local governments over \$130 million annually in revenue foregone. Costs of tax administration and tax evasion are detailed. Various recommendations would improve tax administration and provide for more uniform rates through a Federal incentive plan. Available from ACIR, Washington, D.C. 20575.
